

LogixPath software brings latest technologies to Businesses to effectively manage information and processes from product development to sales orders and to production or services.

Targeted Customers:

Product and service providers: such as product creators or manufacturers, work order contractors, and service providers.

Business Management Processes and Modules

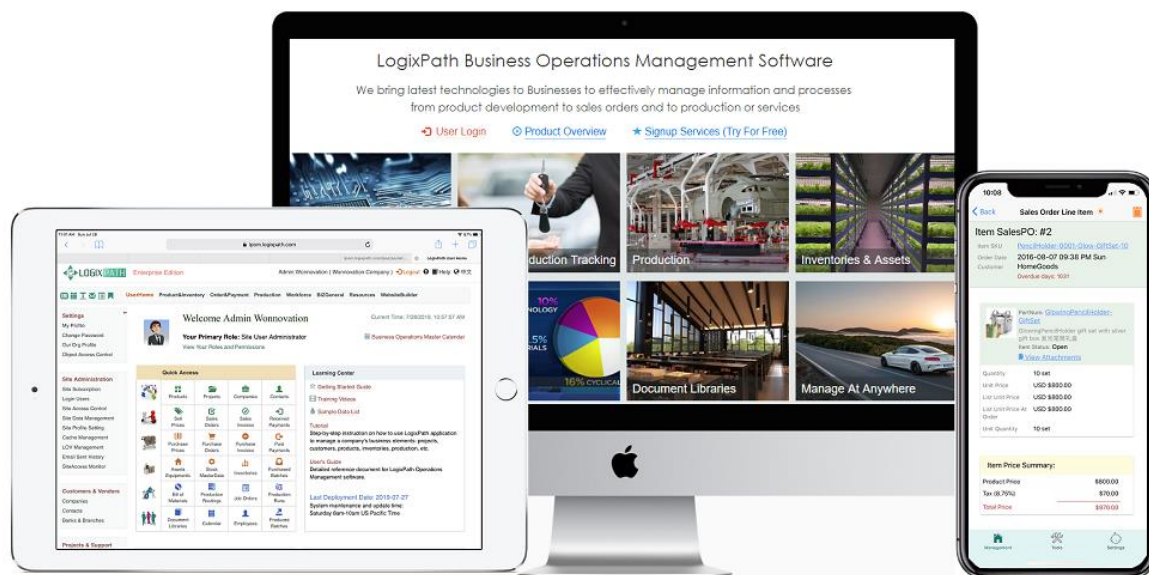

Customer Benefits:

- Use a single platform to efficiently manage business processes and elements from sales orders to product and service fulfillment
- Follow through the Order To Fulfillment lifecycle to ensure on schedule product/service creations and deliveries anywhere at anytime
- Discover and control costs, qualities, problems during the planning and production or services
- Real time view of material, equipment, and workforce demands and capacities
- Enable traceability for regulatory and ethics compliances and customer mandates
- Effectively manage product R&D processes to create more competitive products
- Capable of creating and managing sales orders with configurable or customizable products
- View business operations status, performance, and trend via data statistics, analysis, and dashboard
- Collaborate with customers via customer portal on product/service orders and general discussion

Software Access:

- Via web browser running on PC, tablets, or smart phones.
- Use LogixPath Mobile APP installed on iOS or Android smart phones and tablets.
